The DAR Genetics initiative is a project dedicated to the National Society Daughters of the American Revolution (NSDAR) to connect members, their families, and prospective members actively pursuing the application process through use of DNA evidence. DAR members may submit mitochondrial DNA, autosomal DNA, or Y-DNA to the project. The NSDAR was founded in 1890 to promote historic preservation, education, and patriotism. Any woman 18 years or older, regardless of race, religion, [Read more](#)

Answer to the true false question on your Worksheet for DNA Network (4d.)

DAR GENETICS require at least two Y-DNA from at least two test subjects with Documentation to prove a new member

The Daughters of the American Revolution (DAR) requires at least two Y-DNA test results from at least two test subjects to prove a new member. This requirement is part of the DAR's policy to accept DNA evidence as proof of lineage for membership applications. The Y-DNA test results must be submitted along with other documentation to prove heritage. The DAR has accepted Y-DNA evidence since 2014 and will consider it in conjunction with all other source documentation provided to prove lineage. However, Y-DNA will not be considered as stand-alone proof of lineage because it can only be used to point to a family, not as absolute proof for an individual.
